

Warm Greenhouse Vegetable Schedule

See next page for the
Cool Greenhouse Vegetable Schedule

This chart applies to greenhouses that run winter night temperatures above 45° F (7° C) and to solar greenhouses that are in a climate that receives a winter monthly average of 45 percent or more of possible sunshine as listed by your closest National Weather Service office (see Average Percentage of Sunshine for Selected Locations appendix).

Planting Growing and Harvesting (P, G, H) Schedule

The following schedules are coded like this: *P* designates a possible month to plant the crop. *G* indicates good months to be growing the crop toward maturity. *H* means the crop, if grown to maturity, could be harvested during these months. There are many variables involved in growing vegetables in a greenhouse that make it difficult to be totally accurate. But this general guide should help you in much of your planning.
